

# Stayput School Patrol System

## For School Patrol Crossings & Kea Crossings

RTL's Stayput School Patrol System is the go-to system for both School Patrol Crossings & Kea Crossings. Our Stayput School Patrol System substantially reduce the down time either side of the actual patrol times - no more transporting equipment to and from the crossing! The patrol signs are safely securely locked away into the top cover. All you need to carry out to each patrol is the key to unlock it!

### How it works:

The RG-28 School Patrol sign is stored in the top cover and is secured with the padlock.

To deploy, the supervisor simply unlocks the padlock, lowers the RG28 into place and secures it into place with the padlock through the bottom bracket.

After the patrol is finished just lift the RG28 School Patrol sign back up and lock it into the top cover.

### Features:

- Provides a safer environment for school patrol teams
- Our Stayput stays put - at the crossing ready to go!
- NZTA-approved for Pedestrian School Crossings & Kea Crossings
- Re-enforces education & safety in schools
- Customize the top cover with the school logo or mantra

[View our Stayput School Patrol Videos on YouTube](#)

### Road Patrol Setup:

#### Before Patrol Setup

With the Stayput, Staff just need to unlock the School Patrol Arms School Patrol Arms and lower them down. Ready!

#### After Daily Patrol

After the Patrol, the patrol arms are simply lifted up into the Stayput Top Cover, where they are stored and secured by a padlock.

### By installing the Stayput School Patrol System, Schools can:

- Substantially reduce the down time either side of the actual patrol times - no more transporting equipment to and from the crossing, allowing more time in the classroom.
- Reduce the amount of valuable funding spent on repairing damaged school patrol equipment.
- Further improve safety, community spirit and ownership by customising the top cover with a school logo or mantra and adding a safety message "LOOK both ways and LISTEN before you cross the road".

For more information, please give us a call and talk to one of our team v2.5 Jan 2026

## Kea Crossings/ School Crossing Points

Kea Crossings do not have painted pedestrian crossing markings and are used only during school crossing times. At all other times, the road operates as a normal roadway. School patrol arms and white support posts or poles are finished in plain white for clarity and consistency.

Kea Crossing flags are installed on both kerb extensions for visibility and are displayed only while the crossing is in use.

Stayput available with standard or perforated disc options, with the perforated disc designed to reduce wind drag.

### 1 Stayput School Patrol System with a Standard Orange Disc

**ORDER: PC02.3 03**

*has a plain white arm to suit Kea Crossings*

### 2 Stayput School Patrol System with a Perforated Orange Disc to reduce wind drag

**ORDER: PC02.3 04**

*has a plain white arm to suit Kea Crossings*

## Typical Setup - Kea Crossing

**Stayput Top Cover**  
With Safety Message  
& Custom Branding  
+ 3 ARC Brackets

**Plain White Steel Pole**  
Galv & Powdercoated  
76mm dia x 4.0m  
(sold separately)

**Stayput Mid Bracket**  
& Padlock & Key  
+ 2 AUO Brackets & Extra Nuts  
& Bolts

**Stayput School Patrol**  
Disc, Arm and Bracket  
+ 2 AUO Brackets, Strengthening  
Rod & Extra Nuts & Bolts

**In-Ground Socket**  
76mm dia x 400mm  
(sold separately)

## Kea Crossing Flags

**ORDER: PC04 KITW**

**Includes:** Fluoro Flag, Sign Brace & Mounting Bracket. Includes Carry Bag for storing the kit

Note: All components can be purchased separately

RTL's Kea Crossing Flag Kit includes the essential components to clearly identify an active school crossing and improve visibility for approaching motorists.

TCD Rule: W16-4.1

TCD Code: WU21

## Pedestrian Crossings/ School Crossings

If it's a Pedestrian Crossing / Zebra Crossing, then the school patrol arm and the steel pole should be black and white to mimic the white paint markings on the pedestrian crossing.

In the photo, you will see the school patrol arm on the lollipop sign and the pedestrian pole are alternating black and white.

This is correct for this type of crossing. Note - The orange belisha discs are only used at Pedestrian Crossing / Pedestrian Crossings.

### Stayput Ordering:

Stayput System for School Crossings can supplied with a standard disc or a perforated disc, designed to reduce the wind drag.

- Stayput School Patrol System with a Standard Orange Disc

**ORDER: PC02.3 01**

*black and white arm to suit a Pedestrian Crossing*

### School Testimonial

We have found that our stay put signs have been better replacement option when compared to the old lollypop signs we had previously.

Our patrol monitors find it so much easier not to have to carry out the heavy old signs, It is very easy to unlock the stay put signs, do their patrol duty and then put them back into the cover and lock them at the end of their duty.

The signs are very robust and stand up well during windy weather conditions. We really liked the personalised school logo on the sign and people in our school community have commented on them. They look very professional and are easy to read.

We think it would be most advantageous if the signs were supplied, installed, and maintained by the same company as our wait was too long from the Auckland Transport contractors and the signs could have been saved and not replaced had they had not been vandalised. The initial damage from the accident was only the pole that needed replacing as the sign had not been damaged. The pole damaged was the result of passersby interfering with it.

We are delighted that we opted for the Stay Put Signs as they are easy to use, do not require storage and are robust.

Yours sincerely

Julie Paul  
Principal

### School Testimonial

We highly recommend the Stayput School Patrol system. Worth installing in every school.

What we most appreciate about the system:

- Students are able to set up crossing duty much more quickly.
- No longer need to store bulky signs.
- During covid restrictions - it was easy to allocate staff to do crossing duty when students were unavailable (no need to carry signs up the hill from the shed to the crossing). Just grab the key and we were ready to go.
- Much safer to set up in high winds . . . signs are under control at all times.
- Students definitely enjoy the new system - no longer having to carry heavy poles. Trying to anchor the old poles into position was also difficult for some.
- Very robust system.
- Personalized signage adds to the entrance of the school - great reminder for crossing rules too.
- Parents commented when they first went up - how professional the signage looks. Easy to read and our logo looks great.

Regards  
Christine Matos

### School Testimonial

The new Stayput School Patrol system was installed on the two Sunnyhills pedestrian crossings this term. The system is so much more user friendly for all concerned. Carrying the old heavy signs to the gate and trying to manage them in high winds has been problematic for years. Our student patrollers appreciate the change as this makes their task so much easier. It also means that the signs are always in place, easy to access and the storage is neat and tidy.

The safety messages support our Travelwise and community messaging for pedestrians. We love how they also are personalised with our school logo too! They have been a wonderful improvement.

Yours faithfully  
For: Sunnyhills School

Justine Driver  
**Principal**

### Council Contract Officer

- Damage to the STOP disc was common in the old carry-out system. Arms were often dropped & dragged with progressive damage to the disc or to the mounting points on the crossing arms. This issue does not exist with the new system.
- **Staff and parents have commented on the positive impact they have when seeing both the school crest and the crossing safety message on the disc covers. Fostering community ownership.**
- Staff and parents have also commented on the fact that they have often felt sorry for the smaller children when they have seen them staggering while carrying out the old crossing arms and that this will no longer be the case with the new installation.
- Patrol children have commented on how easy it is now that they don't carry the patrol arms out, only the flags.
- No negative comments received about the new installations.

### Patrol Staff & Supervisors

- **The new system is better because we just unlock and start. Safer, more convenient and quicker.**
- How they are stored is very effective and unobtrusive.
- They liked having reminders about safe crossing on the storage part of the new system.
- Easy to manage.
- The gear is always in the right place, easy for children to manage, great on wet and windy days.
- Better as no storage issues with large signs at night and during the day

### Children who do the Patrols

- Prefer the new one because all you do is unlock and bring the sign down, easy as.
- It's much quicker as before we needed to go up 10 minutes earlier.
- **You don't have to set up everything and don't have to carry them out.**
- It looks tidy and it's easy for me to handle.
- It's easier and doesn't burn my arms.
- Doesn't break, easier to manage on windy days.
- Hands free to walk back to school.
